

How to set up a Data Projector

1. Connect one end of the power cable to the rear of the Data Projector.

2. Connect the other end of the power cable to the wall socket.

Important > Do not press the power button yet !

3. Connect Laptop to Projector

Connect one end of the cable into the Projector.

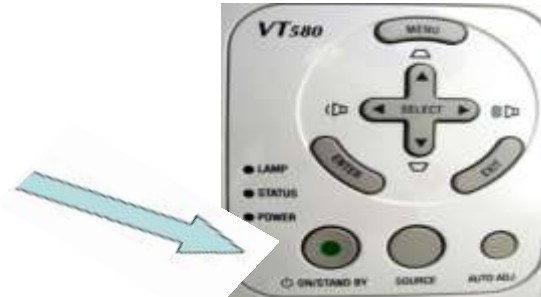

Connect other end to the Laptop.

4. Power up the projector

- First turn the main power switch to the ON position.

Power {on standby} button is on top of the Projector.

5. Power up the laptop.

6. Choose > **Input > Comp 1** on the Data Projector menu (it is usually the default) .

7. To project the laptop screen up >

> Click the **F4 or F5** button on the laptop keyboard (it will have an image of a laptop beside a screen). You might need to hold down **FN** (function).

Adjust size and image

8. Adjust the image.

9. To turn off > follow screen instructions.

10. Leave Projector **until cool** before moving.
